The City Council of Las Palmas de Gran Canaria, through the Council of Ciudad de Mar, has released on Wednesday June 7 the new equipment of the public address of Las Canteras beach, which has been completely renovated after twenty years to full Performance on the beach. In this sense they have changed the 66 loudspeakers that give sound to the messages and warnings of the beach.

This new public address system makes a division of the beach into 5 sectors, La Puntilla, Tomás Miller, Playa Chica, Peña La Vieja and La Cícer, which will allow to send messages and warnings in a generic way, when they affect the whole beach, or When it comes to a specific sector. Councilor for Ciudad de Mar, José Eduardo Ramírez, explained that the work has included "an exhaustive control of the volume, which has been regulated by zones, with the aim of making the messages can be heard clearly from the edge of the Beach".

The popular messages in English and Spanish refer to the state of the sea, the status of zone security flags, loss of minors, environmental awareness, permitted uses on the beach or the appearance of jellyfish and precautionary measures, among others .

The new installation, horns of public address and wiring, has been fixed in five stages. On the one hand, we have acted in the supply and laying of the new trunk cabling network from the public address system, to each of the beach areas, through the existing underground services gallery.

Secondly, the supply of the new wiring harness network has been carried out, from the existing service gallery to the lower register of each public address post, and from there to the top of the pole to connect it to the speakers.
